Air Assisted Sortation

While working on a project for an online retail customer, Blesco realized standard sortation would not work for the application. The online retailer ships product out of their facility in a range of packaging from carton, and poly bags to letters and envelopes. A standard sorter solution was not capable of sorting both large cartons and small, lightweight envelopes and poly bags. They needed a different type of sorter that would allow them to sort this wide range of product in the most efficient way.

That is when Blesco, Inc. developed air assisted sortation. The air amplifiers send timely streams of air which assist the sorter divert mechanism to divert the product to their respective destinations. This type of sortation will divert up to 90 units per minute and can be used with other sorters or conveyor depending on the specific application. The air assisted sortation is more cost effective than the standard envelopes and bag sorters that are currently on the market. Blesco is also able to utilize this product in with existing sortation systems for both new system designs as well as retrofits.

Currently, this technology is patent pending.

Save The Date

An Intimate Preview to Promat

*The 2008 Blesco Annual Automation Show will be held on September 9th. Mark your calendars today!
More details to follow.*

Upcoming Events:

May 4-7:
[WERC](#) - Chicago IL
Booth #46

May 19-21:
[ACCM](#) - Orlando, FL
Booth #1234

July 13-15:
[OFA](#) - Columbus, OH
Booth #1334

September 9:
Blesco Automation Show
Grand Rapids, MI

October 6-8:
[FMI](#) - Minneapolis, MN

October 12-14:
[IFDA](#) - Pittsburgh, PA
Booth #1123
